

# SAN TAN WEST AREA DRAINAGE MASTER PLAN

The Flood Control District of Maricopa County, in collaboration with the Town of Gilbert, the Town of Queen Creek, Pinal County and Gila River Indian Community, is conducting the San Tan West Area Drainage Master Plan (ADMP). This study will identify flooding problems and develop strategies to reduce flooding hazards within the watershed of the San Tan Mountains. Once completed, the study will be used to identify, prioritize, and budget future flood mitigation projects.

The San Tan West ADMP will update and refine the findings of the San Tan West ADMS Update (2018).

The San Tan West ADMP will:

- Create a comprehensive database of known flooding and drainage problems.
- Develop models using new mapping.
- Assess flooding hazard and previously proposed solutions.
- Restudy floodplains in the project area.
- Prepare potential solutions for areas with high flooding risk.

## Study Area:

The San Tan West ADMP focus area covers approximately 45 square miles in the southeastern portion of Maricopa County and

northwest portion of Pinal County, and includes portions within the towns of Queen Creek and Gilbert, unincorporated areas of both counties, as well as the northern portion of the Gila River Indian Community. The limits of the study are also shown on the attached map.

## How Could the Study Affect You?

The results will empower residents to make informed decisions regarding their flooding risk. A document will be produced that includes structural as well as non-structural recommendations. Town and county officials can look to this document when making decisions on infrastructure improvements, regulation changes or community education opportunities. Individual residents can look to the hazard mapping to plan for flooding scenarios that are based on updated data.
