

SAN TAN WEST AREA DRAINAGE MASTER PLAN

The Flood Control District of Maricopa County, in collaboration with the Town of Gilbert, the Town of Queen Creek, Pinal County and Gila River Indian Community (GRIC), is conducting the San Tan West Area Drainage Master Plan (ADMP). This study will identify flood hazards and risks within the San Tan Mountains Watershed. Once completed, the study will be used to identify, prioritize, and budget future flood mitigation projects.

The San Tan West ADMP will update and redefine the findings of the original San Tan West ADMS, completed in 2013 and the San Tan West ADMS Update, completed in 2018. This study will identify any new flooding problems due to recent land use changes within the watershed since the previous studies were conducted.

The San Tan West ADMP will:

- Create a database of known flooding and drainage problems.
- Develop state-of-the-art models using new contour mapping.
- Assess flooding hazard and previously proposed solutions.
- Restudy the floodplains in the project area.
- Prepare a plan to provide potential solutions for flood-prone areas.

Study Area:

The San Tan West ADMP focus area covers approximately 45 square miles in the southeastern portion of Maricopa County and northwest portion of Pinal County, within the towns of Queen Creek and Gilbert, unincorporated areas of Maricopa and Pinal counties, as well as the northern portion of the GRIC. The limits of the study are shown on the attached map.

How Could the Study Affect You?

The results of this study will be used to provide awareness of flood hazards and risks so that residents may be better prepared and make informed choices to reduce their risk of flooding. This study will also reassess and refine existing proposed solutions using updated, more accurate contour mapping.
